

USE TOILETS TODAY FOR A HEALTHIER TOMORROW

19 November
WORLD TOILETS DAY

4.5 BILLION

PEOPLE LIVE WITHOUT A SAFE TOILET

When nature calls...

...we need a toilet. But billions of people don't have one. This means human faeces, on a massive scale, is not being captured or treated – contaminating the water and soil that sustain human life.

We are turning our environment into an open sewer. We must build toilets and sanitation systems that work in harmony with ecosystems.

World Toilet Day is about nature-based solutions to our sanitation.

892 MILLION

PEOPLE PRACTISE OPEN DEFECACTION

1.8 BILLION

PEOPLE USE A DRINKING WATER SOURCE THAT COULD BE CONTAMINATED WITH FAECES
